```
The present sequence represents a peptide antagonist of zonula occludens CC toxin (zot) polypeptide. The specification describes a method of CC suppressing antigen presenting cell (APC) mediated lymphocyte CC proliferation in a mammalian host pre-exposed to a particular antigen. CC Zot-related immunoregulator selected from Zot (zonula occludens toxin) or CC Zot-related immunoregulator selected from Zot (zonula occludens toxin) or CC The method can be used to down-regulate the activity of the APC. CC proliferation in mammalian hosts suffering from auto-immune or correct immune reputate APC-mediated lymphocyte CC immune-related disorders, immune system rejection subsequent to tissue autoimmune or immune related disorders include multiple sclerosis, correct disease, Sjogren's syndrome, systemic lupus erythematosus, auto-immune CC disease, Sjogren's syndrome, systemic lupus erythematosus, auto-immune CC disease, Sjogren's syndrome, systemic lupus erythematosus, auto-immune CC disease, Addison disease, autoimmune crititis, pernicious CC polyneuritis, autoimmune coagulopathies, myasthenia gravis, CC anemia, vasculitis, autoimmune coagulopathies, myasthenia gravis, CC Dermatomyositis, and scleroderma. The inflammatory or allergic disease, CC watposi's sarcoma, multiple sclerosis, inflammatory or allergic disease, CC conditions associated with mycotic, viral, parasitic, or bacterial

The present sequence is that of peptide FZI/I, which is based on C a peptide motif (see Y79119) of human adult heart zonulin, but has a mino acid changes, corresponding to Gly at position 8, Val C at position 12 and Gln at position 13 of the adult heart zonulin CC demonstrate that there is a region spanning residues 8-15 of the C toxin (20T) that is crucial for binding to the target receptor, and CC specificity of this binding. The N-terminal sequences of human CC specificity of this binding. The N-terminal sequences of human CC identify the motif involved in receptor binding. Peptide antagonists CC (see Y79105-29) based on this motif are useful as antinflammatory CC agents for treatment of gastrointestinal inflammation, and for harriar
Sequence
                                                                                                                                                                                                                                                                                                                                                                     New peptide antagonist of zonulin useful as antiinflammatory agent for treating cerebral ischemia, stroke, cerebral edema, gastritis, shigellosis, viral gastroenteritis, meningitis, encephalomyelitis
                                                                                                                                                                                                                                                                                                                                           Example 4; Page 38; 69pp; English.

The gene cluster is also referred to as the tyle gene, and was isolated from Streptomyces fradiae. These sequences are multifunctional proteins which direct the synthesis of the polyketide tylactone, isolated from Streptomyces fradiae. Tylactone is the basic building block of the antibiotic tylosin. The DNA sequence can be modified so as to alter the type of carboxylic acids incorporated, the number of carboxylic acids incorporated and/or the post-condensation reactions performed, thereby resulting in novel tylosin-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4155

CC C74446 to C77606 encode the proteins given in B40237 to B43397, which CC represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipociatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; CC dermatological; immunosuppressive; antiinflammatory; antidiabetic; hypotensive; CC dermatological; indunesuppressive; antithyroid; and antianaemic. The coagulant; antirheumatic; antithyroid; and antianaemic. The CC or preventing or treating pathological conditions associated with an CC or preventing or treating pathological conditions associated with an CC or proteins in gene therapy vectors. The proteins and nucleic acids may be CC used to treat cancers, proliferative disoorders, neurodegenerative CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease, CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency CC (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

This sequence represents a hybrid protein of the invention. This sequence CC was created by replacing a EcoRI-ApaI fragment of srmg ORF1 with a CC each of the two genes is not given in the position of the residues from CC (see T80414) was isolated from Streptomyces ambofaciens, and encodes the CC multi-functional proteins which direct the synthesis of the polyketide CC platenolide. Platenolide is the basic building block of the macrolide CC synthase gene cluster of the invention. The tylG gene (see T80413) is the tylactone CC synthase gene cluster of the invention. The tylG sequence was isolated CC direct the synthesis of the polyketide CC income Streptomyces fradiae, and encodes multifunctional proteins which building block of the antiblotic tylosin. The tylG sequence can be used CC transform S. ambofaciens lacking the srmg ORF1 sequence, or S. fradiae CC lacking the tylG ORF1 sequence, so that they can produce polyketides. The CC DNA sequence can be modified so as to alter the type of carboxylic acids incorporated and/or the

The gene cluster is also referred to as the srmG gene, and was isolated from Streptomyces ambofaciens. These sequences are multi-functional proteins which direct the synthesis of the polyketide platenolide. Platenolide is the basic building block of the macrolide antibiotic spiramycin. The DNA can be used to produce compounds exhibiting antibiotic activity based on the platenolide structure, including specifically the macrolide antibiotic spiramycin and spiramycin nanalogues and derivatives. Modifications of the platenolide synthase DNA sequence can be made so as to change the number and type of carboxylic acids incorporated into the growing polyketide chain and to change the kind of post-condensation processing that is conducted.

The gene cluster is also referred to as the srmg gene, and was CC isolated from Streptomyces ambofaciens. These sequences are multi-functional proteins which direct the synthesis of the polyketide CC multi-functional proteins which direct the synthesis of the polyketide CC platenolide. Platenolide is the basic building block of the macrolide antibiotic spiramycin. The DNA encoding this sequence was used along with the tylG gene (see T80413) to create a hybrid ORF1 sequence (see T80415). CC The tylG gene is the tylactone synthase gene cluster of the invention. CC The tylG sequence was isolated from Streptomyces fradiae, and encodes multifunctional proteins which direct the synthesis of the polyketide CC tylosin. The hybrid sequence can be used to transform S. ambofaciens CC sequence, so that they can produce polyketides. The DNA sequence can be condified so, as to alter the type of carboxylic acids incorporated, the number of carboxylic acids incorporated, the post-condensation performed, thereby resulting in novel tylosin-related
                                                                                                 Arabidopsis thaliana

The method utilises a nucleotide comprising an excised RNA transcript encoded by the group II intron group II of the COXI gene and a protein encoded by the DNA substrate in the presence of a divalent cation so that at least molecule is attached to one or both of the cleaved and a nucleic acid coxI gene in the presence of a divalent cation so that at least molecule is attached to one or both of the cleaved strands. The also be used.

                                                                                                                                                                                                                          Y34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see X91990) of Chlamydia pneumoniae.

C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Griffals R;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                        Score

IV COLLAGENS.

-!- DISEASE: DEFECTS IN COL4A4 ARE ASSOCIATED WITH THE TYPE II AUTOSOMAL RECESSIVE FORM OF ALPORT SYNDROME (AS), AN HEREDITARY GLOMERULONEPHROPATHY CHARACTERIZED BY PROGRESSIVE RENAL FAILURE, HEMATURIA AND DEAFNESS. THE RECESSIVE FORM OCCURS EQUALLY BETWEEN HEMATURIA AND DEAFNESS. THE RECESSIVE FORM OCCURS EQUALLY BETWEEN MALES AND FEMALES.

-!- DISEASE: DEFECTS IN COL4A4 ARE ASSOCIATED WITH FAMILIAL BENIGN CHARACTERIZED BY PERSISTENT HEMATURIA, AN ELECTRON MICROSCOPICALLY DETECTABLE THIN GLOMERULAR BASEMENT MEMBRANE GIBBLAND AND AN AUTOSSOMAL DOMINANT MODE OF INHERITANCE RENAL FUNCTION REMAINS NORMAL. IN CHILDREN DIFFERENTIATION BETWEEN FBH AND AS CAN BE DIFFICULT, BECAUSE BOTH DISORDERS ARE MANIFESTED BY PERSISTENT HEMATURIA, AND THIN GBM AT THAT AGE.

-!- SIMILARITY: TO OTHER TYPE IV COLLAGENS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ALPHA 6(IV). ACH OF MICH CAN FORM A TRIPLE HELIX STRUCTURE WITH 2 OPHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

-!- SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).
-!- TISSUE SPECIFICITY: ALPHA 3 AND ALPHA 4 TYPE IV COLLAGENS ARE COCCLEA, LUNG AND BRAIN.
-!- TOUGHT CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS OF KIDNEY, EYE, COCLLEA, LUNG AND BRAIN.
-!- DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.
-!- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPLE THEIR CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.
-!- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPLE THAINS.
-!- PTM: TYPE IV COLLAGENS CONTAIN NUMBEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 OF THE CALAGENS.
--- ARE INVOLVED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Boye E., Mollet G., Forestier L., Cohen-Solal L., Heidet L., Cochat P., Gruenfeld J.-P., Palcoux J.-B., Gubler M.-C., Antignac "Determination of the genomic structure of the COL4A4 gene and of novel mutations causing autosomal recessive Alport syndrome.",

Am. J. Hum. Genet. 63:1329-1340(1998).

-I- FUNCTION: TYPE IV COLLAGEN IS THE MAJOR STRUCTURAL COMPONENT GLOMERULAR BASEMENT MEMBRANES (GBM), FORMING A 'CHICKEN-WIRE' MESHWORK TOGETHER WITH LAMININS, PROTEOGLYCANS AND ENTACTIN/

-I- FUNCTION: NEMATODE CUTICLES ARE COMPOSED LARGEILY OF COLLAGEN-LIKE PROTEINS. THE CUTICLE FUNCTIONS BOTH AS AN EXOSKELETON AND AS A BARRIER TO PROTECT THE WORM FROM ITS ENVIRONMENT (BY SIMILARITY).

CUTICLE BY DISULTIDE BONDS AND OTHER TYPES OF COVALENT CROSS-LINKS (BY SIMILARITY).

COLLAGEN COLLAGENS. STRONG, TO OTHER CUTICLE

SUBUNIT: THERE ARE SIX TYPE IV COLLAGEN ISOFORMS, ALPHA 1(IV)-
ALPHA 6(IV), EACH OF WHICH CAN FORM A TRIPLE HELIX STRUCTURE
WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK,
DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS
G-X'Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY
CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL
TRIPLE-HELICAL 75 DOMAIN.

"I PTM: PROLINGS AT THE THIRD POSITION OF THE TRIPLE CHAINS.

RT CC (FIBRILLAR FORMING COLLAGEN IS A MEMBER OF GROUP I COLLAGEN CC (FIBRILLAR FORMING COLLAGEN). IT IS A MINOR CONNECTIVE TISSUE CC (FOLLAGEN TO NEARLY UBIQUITOUS DISTRIBUTION. TYPE V COLLAGEN BINDS CC (FIBRILLAR FORMING COLLAGEN). IT IS A MINOR CONNECTIVE TISSUE CC (FIBRILLAR SULFATE, THROMBOSPONDIN, HEPARIN, AND INSULIN.

CC TO DUA, HEPARAN SULFATE, THROMBOSPONDIN, HEPARIN, AND INSULIN.

CC TO DUA, HEPARAN SULFATE, THROMBOSPONDIN, AND ONE ALPHA 2(V), CHAINS IN PLACENTA.

CC ONE ALPHA 3(V) CHAINS IN PLACENTA.

CC ONE ALPHA 3(V) CHAINS IN PLACENTA.

CC IPTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING CO.

CO ONE ALPHA 3(V) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

CC IPTM: PORTAL STATEMENT OF THE PRO-ALPHA 1(V) CHAIN ARE SULFATED.

CC IPTM: PORTAL STATEMENT OF THE PRO-ALPHA 1(V) CHAIN ARE SULFATED.

CC TYPE I (EDS1), A DISEASE CHARACTERIZED BY LOOSE-JOINTEDNESS AND CRACILLER, VELVETY, STRETCHABLE, BRUISABLE SKIN THAT HEALS WITH OR PROCULTAR TO ALPHA 3(V) AND ALPHA 1(XI) CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PIR; S16024;
